National Missing and Unidentified Persons System (NamUs)

- Motivated by an overwhelming need for a central reporting system for missing persons, NamUs was established in 1998 by the National Institute of Justice (NIJ) and the Office of Justice Programs (OJP).
- Funded by the NIJ for the development and management of the national computerized database of missing persons, and related national and state resources.
- Provides a national clearinghouse, assisting law enforcement agencies, missing persons clearinghouses, and the general public with locating missing persons, identifying victims of human trafficking, and locating individuals who may have disappeared.
- Provides goods and services at no-cost to the forensic science and justice communities.
- Provides a cost-effective means of locating victims of missing persons through the use of the national clearinghouse.
- Provides support to the NIJ and the Department of Justice with the development of additional technologies with forensic applications.
- Provides immediate investigative information without the need for additional testing.

About the NFSTC

• Established in 1995 as a not-for-profit corporation by the American Society of Crime Laboratory Directors (ASCLD)
• Provides laboratory services to the forensic science and justice communities.
• Provides laboratory services for the development and implementation of forensic science technologies.
• Provides the forensic science and justice communities with the knowledge to effectively use forensic DNA evidence as a crime fighting tool.
• Provides support to the NIJ and the Department of Justice with the development of additional technologies with forensic applications.
• Provides immediate investigative information without the need for additional testing.

DNA Resource Center: www.dna.gov

- Designed to facilitate the transfer of five emerging technologies with forensic applications from researcher to practitioner for twelve analysts in a two-day session.
- Designed to facilitate the transfer of five emerging technologies with forensic applications from researcher to practitioner for twelve analysts in a two-day session.
- Provides immediate investigative information without the need for additional testing.
- Provides immediate investigative information without the need for additional testing.

E-Crime Awareness Tools

- Participate in Electronic Crime Partnership Initiative (ECPI) symposiums
- Provide support to the NIJ and the Department of Justice with the development of additional technologies with forensic applications.
- Provides immediate investigative information without the need for additional testing.
- Provides immediate investigative information without the need for additional testing.

Field Investigation Drug Officer (FIDO)

- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.

Ongoing technology support for NIJ and ECPI E-Crime awareness efforts and training.
- Includes a comprehensive training session, quality assurance guidelines, and established testing procedures.
- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.

Forensic Laboratories

- Participate in Electronic Crime Partnership Initiative (ECPI) symposiums
- Provide support to the NIJ and the Department of Justice with the development of additional technologies with forensic applications.
- Provides laboratory services for the development and implementation of forensic science technologies.
- Provides laboratory services for the development and implementation of forensic science technologies.
